SUMMARY

Software engineering graduate with practical full stack experience and a solid foundation in popular programming languages, web technologies, databases, and frameworks. Actively seeking a software development role to leverage interpersonal, creative, and analytical skills in making meaningful contributions to the world of technology.

EDUCATION

Bachelor of Engineering (Software Engineering)

McMaster University | 2017 - 2023

EXPERIENCE

Software Developer

Clio | January 2022 - August 2022

- Developed Clio's Outlook add-on following SCRUM methodology with a team of 4 developers, enabling clients to seamlessly file millions of emails to Clio's management platform.
- Designed and implemented an endpoint feature for selective re-filing of individual emails, enhancing user control and addressing a critical user concern.
- Investigated, identified, and resolved the top 20 most prevalent bugs reported for the Clio Outlook add-on, leading to enhanced performance and an improved user experience.

Full Stack Course Developer

CreationCamp | September 2021 - April 2022

- Developed and taught a 4-month long full stack web development course for a class of high school students, covering HTML, CSS, JavaScript, MongoDB, Express, React, and Node.js.
- Designed and developed 4 modular template websites for use in web development workshops, which were subsequently utilized in 4 hands-on workshops for 40+ high school students.

Cloud Software Developer Intern

SOTI | May 2021 - August 2021

- Migrated the backend framework for the Cloud Management System solution to .NET, resolving dependencies, addressing library issues, and writing full test coverage for 84 different projects.
- Implemented application-side caching, reducing SQL server calls by over 90% per minute.

President

McMaster Engineering Society | March 2020 - March 2021

- Led a 28-person team in managing a \$750,000 budget to enhance student education and support various areas such as wellness, advocacy, events, and engineering culture.
- Advocated on behalf of over 5,500 students to McMaster University, adjudicatory bodies, and provincial/federal organizations regarding legal, academic, and social issues.

PROJECTS

Utrition (2023): Open source project that allows users to track their progress towards their health goals. Users can upload a picture, speak, or type out what they ate in natural language, and Utrition provides all the nutritional data of the meal and saves it in the user's profile. The profile contains statistics and data visualizations to assist users in tracking their nutrition goals. **Stack:** Python, Flask, JavaScript, React, HTML/CSS, AJAX, Tensorflow, Git

NooTab (2023): A minimalist new-tab extension for Firefox and Chrome that offers a customizable layout and seamless access to search, calendar scheduling, and note-taking. [Try it out here!](#) **Stack:** HTML/CSS, JavaScript, Git

Questly (2022): Web application for middle school teachers to deliver computer science education. It provides an online classroom management system, grade-specific modules, assessments, walkthroughs, progress tracking, and grade reporting. **Stack:** Python, Django, PostgreSQL, HTML/CSS, JavaScript, Git

Ebook Genesis (2021): Python bot that finds and downloads ebooks from IRC channels using existing repositories and Direct Client-to-Client sub-protocol. One of the only open-source IRC ebook bots. **Stack:** Python, Bash, Git

alexmoica.com (2020): Personal professional website created to enhance internet presence and showcase skills to potential employers. **Stack:** HTML/CSS, JavaScript, Git

OTHER

Technical Skills: C#, Python, Ruby, Java, SQL, HTML, CSS, JavaScript, React, Vue.js, REST API, Node.js, Django, Ruby on Rails, PostgreSQL, MySQL, Linux (Ubuntu/Debian), Git, Jira, CI/CD

Languages: English (Native), Romanian (Fluent), French (Limited Working Proficiency)
